Programmer with excellent qualities of creativity and functionality. Effective and agile management in terms of learning and performance, with the ability to work in a team.

I have been working with Angular for 1 year on a large-scale project, in which we use Typescript, Sass, and also version control through GIT. For the different tasks we manage Jira and Confluence, together with the Microsoft Team and Slack for communications. At the same time I'm currently doing personal projects in React.

SKILLS
